Gas Conversion Field Assembly Kit
Natural Gas to Liquefied Petroleum (Propane) or Liquefied Petroleum (Propane) Gas to Natural

Only for use with Slant/Fin boilers equipped with Honeywell VR8200, VR8204, VR8300 and VR8304 gas valves, either standing (continuous burning) pilots or intermittent ignition systems.

**WARNING**
This conversion kit shall be installed by a qualified service agency in accordance with the manufacturer's instructions and all applicable codes and requirements of the authority having jurisdiction. If the information in these instructions is not followed exactly, a fire, an explosion or production of carbon monoxide may result causing property damage, personal injury or loss of life. The qualified service agency is responsible for the proper installation of this kit. The installation is not proper and complete until the operation of the converted appliance is checked as specified in the manufacturer's instructions supplied with the kit.

**WARNING-IMPORTANT**
1. This conversion kit is supplied with the same parts normally provided on SLANT/FIN factory built boilers which are Design Certified by CSA International. However, because we have no way of applying our own quality control procedures to field alterations made by others on this boiler, these alterations are not the responsibility of SLANT/FIN. These alterations are the responsibility of the installer of this conversion kit. The instructions below must be carefully followed in order to duplicate factory installation.

2. The installation must conform to the requirements of the authority having jurisdiction or, in the absence of such requirements, to the National Fuel Gas Code ANSI Z223. 1-latest edition.

**WARNING**
LIQUEFIED PETROLEUM (L.P.) PROPANE GAS-FIRED BOILER LOCATION
REQUIRES SPECIAL ATTENTION
Liquefied Petroleum (LP) propane gas is heavier than air. Therefore, propane boilers, piping, valves must NOT be installed in locations where propane leaking from defective equipment and piping will "pool" in a basement or other space below the leak.

A spark or flame from the boiler or other source may ignite the accumulated propane gas causing an explosion or fire. Provide a level, solid foundation for the boiler. Location should be as near the chimney as possible so that the flue pipe from boiler to chimney is short and direct.

THE UNIFORM MECHANICAL CODE may be in effect in your geographic area.
The following precautions are cited by the 1994 UNIFORM MECHANICAL CODE, section 304.6: "LPG Appliances. Liquefied petroleum gas-burning appliances shall not be installed in a pit, basement or similar location where heavier-than-air gas might collect. Appliances so fueled shall not be installed in an above-grade underfloor space or basement unless such location is provided with an approved means for removal of unburned gas."
Consult Chapter 5 of the 1994 UNIFORM MECHANICAL CODE for design criteria of the "approved" means for removal of unburned gas.

The boiler warranty is void unless this field assembly conversion kit has been properly installed, labels completed and applied to boiler and registration card completed and received by Slant/Fin within 10 days after kit has been installed in boiler.

GALAXY BOILER
Remove front panel (Figure 1) by pressing hand against panel and pushing up. Remove burner access door (Figure 2) by removing 2 wing nuts, slide panel forward and out.

BEFORE STARTING
Check contents for kit:
All components are either marked with a red stripe, a label with a model number or a stamped number on them.

1. Honeywell Conversion Kit:
   a) Spring: propane = red; natural = stainless steel
   b) Regulator adjusting screw
   c) Cap screw: propane = black; natural = silver
   d) Instructions
   e) Label

2. Main Burner Orifices:
   See Table 1 for the correct size orifice as it applies to this conversion.

3. Pilot Burner Assembly:
   a) Pilot burner:
      Standing pilot—Honeywell Q314A
      Intermittent ignition—Honeywell Q345A
   b) Pilot orifice:
      Propane—Honeywell BBR-10
      Natural—Honeywell BCR-18

4. Ignition Control (for IID only):
   Honeywell S8600M (for Sentry, Sentinel or Victory V series boilers) or S8670E (for Galaxy boilers).
   Required for conversion to propane only.

5. Three Labels: Boiler Conversion Label, Affidavit Label and Gas Valve Label.

6. Registration Card

Caution: The gas supply shall be shut off prior to disconnecting the electrical power, before proceeding with the conversion.

INSTALLATION
1. Turn Off Gas to Appliance
   a) Set thermostat to lowest level.
   b) Turn off all electric power to the appliance.
   c) Turn the gas control knob clockwise to the off position.
   d) Close all gas cocks.
   e) CAUTION: LET BOILER COOL.
   f) Remove front jacket panel.
   g) Remove burner access door.

2. Gas Valve Conversion
   a) Remove pressure regulator cap screw.
   b) Remove pressure regulator adjusting screw.
   c) Remove regulator spring.
   d) Insert appropriate replacement spring (tapered end down).
e) Install new pressure regulator adjustment screw until it is flush with the top of the casting.
f) After e) above, turn adjustment screw clockwise as follows:
   Propane Gas — 5-7⁄8 full turns
   Natural Gas — 6 full turns
g) Install the NEW cap screw.
h) Place the gas valve conversion label from the Honeywell kit over the gas valve model number.

3. Pilot Burner Conversion
   a) Disconnect pilot line from gas valve.
   b) Disconnect flame sensor.
   c) BE SURE BURNERS ARE COOL BEFORE CONTINUING. NOTE LOCATION OF BURNER WITH PILOT. REMOVE THE BURNER RETAINER CLIP OF THE PILOT-BURNER. REMOVE THE BURNER. DISCONNECT THE PILOT TUBE AND EITHER THE THERMOCOUPLE FOR STANDING PILOT OR IGNITION WIRE FROM IGNITION CONTROL. (See figure 6).
   d) Remove pilot burner and replace with new pilot burner.
   e) Replace pilot tubing on pilot burner. (It is best to cut off old ferrule and use new one to ensure a proper seal.)
   f) Replace thermocouple or ignition wire on pilot assembly.
   g) Remove existing main burner orifice from the manifold and replace with an orifice from the kit. (See figure 7).
   h) Replace the pilot-burner into the boiler. Replace the burner retainer clip.

4. Orifice Replacement - Remove all other burner retainer clips and remove the rest of the burners.
   a) Remove existing main burner orifices from the manifold.
   b) Install the orifices from the kit. (There may be more orifices than required.)
   c) Reinstall the main burners making sure that the pilot burner is in the same position as above.

5. Ignition Control Replacement (for IID only)

   IMPORTANT

   FOR CONVERSION OF BOILERS EQUIPPED WITH AN INTERMITTENT IGNITION SYSTEM TO PROPANE, THE IGNITION CONTROL MUST BE CHANGED. FAILURE TO INSTALL THE CORRECT IGNITION CONTROL COULD CAUSE A HAZARDOUS CONDITION RESULTING IN AN EXPLOSION OR CARBON MONOXIDE POISONING AND WOULD VOID ANY WARRANTY.
   a) Remove the S8600F Control from the right side of the boiler. Note the location of the wires so that they may be installed on the proper terminals of the replacement control.
   b) Install the NEW S8600M or S8670E control supplied in the kit. Reconnect the wires, including the ignition wire. Check applicable wiring diagram on pages 9 to 15 or the diagram on the boiler to make certain that the wiring is correct.

6. Registration Card and Labels:
   a) Fill out the Boiler Conversion Label, Affidavit Label and Gas Valve Label. Affix the Boiler Conversion Label adjacent to the rating plate on the boiler jacket. Affix the Affidavit Label to the front jacket panel adjacent to the Slant/Fin logo. Affix the Gas Valve label on the inside jacket panel above the gas valve.
   b) Fill out the Registration Card. REMEMBER THAT THIS CARD MUST BE RECEIVED WITHIN 10 DAYS OR THE WARRANTY COULD BE VOIDED.

FINAL CHECKS:
1. Are the burners installed correctly (ports are up)?
2. Is the pilot in the correct position?
3. All of the wiring is correct?
4. All the labels have been filled out and affixed to the boiler?
5. Has the Registration Card been filled out?

GAS LEAK TESTS

Warning: DO NOT OMIT these tests. Open all gas cocks upstream of the boiler gas valve. Paint all pipe joints from the main gas cock to the gas valve with a rich soap and water solution. Bubbles indicate gas leakage. To stop the leak, tighten the joints and fittings. DO NOT USE AN OPEN FLAME FOR TESTING.
CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. “Verify proper operation after servicing.”
CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. “Verify proper operation after servicing.”
CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. “Verify proper operation after servicing.”
WIRING DIAGRAMS FOR SENTINEL HOT WATER BOILERS

CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. “Verify proper operation after servicing.”

Damper circuit is designed to be controlled by low voltage controls. DO NOT use line voltage operating controls to interrupt supply voltage to the L8148E aquastat.

LIGHTING INSTRUCTIONS
Continuous Burning Pilot (24V).
FOR BOILERS EQUIPPED WITH GAS VALVES VR8200 and VR8300.

SAFETY INFORMATION
FOR YOUR SAFETY READ BEFORE LIGHTING

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. This appliance has a pilot which must be lighted by hand. When lighting the pilot, follow these instructions exactly.
B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS
• DO NOT try to light any appliance.
• DO NOT touch any electric switch; DO NOT use any phone in your building.
• Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
• If you cannot reach your gas supplier, call the fire department.
C. Use only your hand to push in or turn the gas control knob. NEVER use tools. If the knob will not push in or turn by hand, DON'T try to repair it, call a qualified service technician. Force or attempted repair may result in a fire or explosion.
D. DO NOT use this appliance if any part has been underwater. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been underwater.

Lighting Instructions
1. STOP! Read the safety information above on this page.
2. Set the thermostat to lowest setting.
3. Turn off all electric power to the appliance.
4. Remove control access panel. (Galaxy models only.)
5. Push in gas control knob slightly and turn clockwise to "OFF".
6. Wait five (5) minutes (longer for propane) to clear out any gas. If you then smell gas, STOP! Follow "B" in the safety information. If you don't smell gas, go to next step.
7. Remove the pilot access panel located below and behind the gas control unit.
8. Find pilot—follow the aluminum tubing from the gas valve. The pilot is between two burner tubes behind the burner access panel.
9. Turn knob on gas control counterclockwise to "PILOT".
10. Push in red button all the way and hold in. Immediately light the pilot with a match. Continue to hold the red button in for about one (1) minute after the pilot is lit. Release knob and it will pop back up. Pilot should remain lit. If it goes out, repeat steps 5 through 10.
   • If knob does not pop up when released, stop and immediately call your service technician or gas supplier.
   • If the pilot will not stay lit after several tries, turn the gas control knob to "OFF" and call your service technician or gas supplier.
11. Replace pilot access panel.
12. Turn gas control knob counterclockwise to "ON".
13. Replace control access panel. (Galaxy models only.)
14. Turn on all electric power to the appliance.
15. Set thermostat to desired settings.

To Turn Off Gas To Appliance
1. Set the thermostat to lowest setting.
2. Turn off all electric power to the appliance if service is to be performed.
3. Remove control access panel. (Galaxy models only.)
4. Turn gas control knob clockwise to "OFF". DO NOT force.
5. Replace control access panel. (Galaxy models only.)
SAFETY INFORMATION
FOR YOUR SAFETY READ BEFORE LIGHTING

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. This appliance is equipped with an ignition device which automatically lights the pilot. DO NOT try to light the pilot by hand.
B. BEFORE OPERATING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS
• DO NOT try to light any appliance.
• DO NOT touch any electric switch; DO NOT use any phone in your building.
• Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
• If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to push in or turn the gas control knob. NEVER use tools. If the knob will not push in or turn by hand, DON'T try to repair it, call a qualified service technician. Force or attempted repair may result in a fire or explosion.
D. DO NOT use this appliance if any part has been underwater. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been underwater.

Lighting Instructions
1. STOP! Read the safety information above.
2. Set the thermostat to lowest setting.
3. Turn off all electric power to the appliance.
4. This appliance is equipped with an ignition device which automatically lights the pilot. DO NOT try to light the pilot by hand.

GAS VALVE VR8204
OR VR8304

5. Remove control access panel. (Galaxy models only.)
6. Turn gas control knob clockwise till knob stops, continue to “OFF”. DO NOT force.
7. Wait five (5) minutes (longer for propane) to clear out any gas. If you then smell gas, STOP! Follow “B” in the safety information. If you don't smell gas, go to next step.
8. Turn gas control knob counterclockwise to “ON”.
9. Replace control access panel. (Galaxy models only.)
10. Turn on all electric power to the appliance.
11. Set thermostat to desired setting.
12. If the appliance will not operate, follow the instructions "To Turn Off Gas To Appliance" and call your service technician or gas supplier.

To Turn Off Gas To Appliance
1. Set the thermostat to lowest setting.
2. Turn off all electric power to the appliance if service is to be performed.
3. Remove control access panel. (Galaxy models only.)
4. Turn gas control knob clockwise till knob stops, then continue to “OFF”. DO NOT force.
5. Replace control access panel. (Galaxy models only.)

BURNER ADJUSTMENT
A. Adjust gas input rate:
1. Consult gas supplier for higher heating value of gas (Btu/cu.ft.)
2. Set thermostat high enough so that boiler will remain on while checking rate.
3. Measure manifold pressure at 1/8" tapping. See label provided with the conversion kit for the correct manifold pressure for the gas that is being supplied. NOTE: Gas pressure may be adjusted by turning pressure regulator screw on combination gas valve (turn clockwise to increase pressure, counterclockwise to decrease pressure). See page 17 for the input rate of your boiler.
   a. Input for PROPANE is approximately at rating shown on rating plate when manifold pressure is 9 1/2" water column.
   b. Input for NATURAL GAS is approximately at rating when manifold pressure is 3 1/2" water column, but should be checked on the gas meter:

   Btuh Input = Btu/cu. ft. x cu. ft. metered in 3 minutes x 20

   Exam ple 1:
   For 1000 Btu/cu.ft. gas, this becomes:
   Btuh Input = cu. ft. metered in 3 minutes x 1,000 Btu/cu.ft. x 20

   Exam ple 2:
   For 1050 Btu/cu.ft. gas, this becomes:
   Btuh Input = cu. ft. metered in 3 minutes x 1050 Btu/cu.ft. x 20

   4. The higher* heating value of gas varies substantially for different localities. Consult with Slant/Fin's Technical Service Dept. for re-orificing procedures if any of the following apply:
   a. Boiler (burner) is overfiring. CAUTION! National Fuel Gas Code ANSI Z223.1-latest edition does NOT permit firing at a higher input rate than the input rate indicated on the boiler rating plate in order to avoid hazardous conditions such as explosion or carbon monoxide poisoning.
   b. Poor higher* heating value of gas is causing the actual input to be substantially lower than the rating plate indication.

* "Higher heating" value of gas is commonly known as "heating value".

The gas metered in 3 minutes to obtain rated input for each boiler model using 1000 Btu/cu.ft. gas is tabulated in the gas rate table.

### B. Main Burner

1. Fire the boiler continuously for at least 15 minutes, to reach burner operating temperature.
2. Observe the flames, all burners. The base of all flame jets should be blue. The tips should be blue shading to orange.
   
   **NOTE:** Dust, disturbed by any movement, will cause bright orange flames. Wait for dust to settle.
3. For one burner, close the air shutter until some of its flame jet tips turn yellow-white, indicating insufficient primary air. Then open shutter until whitish tips disappear completely. Set all burner shutters to the same opening. Observe to make sure that no yellow-white tips appear over any portion of the flame. Small yellow tips at the pilot location are permitted.

### C. Main Burner Ignition Checkout and Pilot Adjustment

1. The pilot flame must not smother or snuff out when tested as follows:
   a. Main burner ignition from cold start-repeat.
   b. Continued operation of main burner.
   c. Main burner ignition with appliance at maximum operating temperature after prolonged operation.

   **NOTE:** Observe operation of the pilot burner with appliance doors in the final operating position. Use of a mirror may be helpful.

2. Safety Shutdown Checkout
   a. For proper operation the pilot should engulf the thermocouple or flame sensor as shown below.
   b. To adjust pilot, turn pilot flow adjustment screw on valve clockwise or counterclockwise to give a steady flame enveloping 3/8" to 1/2" inch of the tip of the thermocouple or flame sensor. Note that turning the pilot adjustment screw clockwise will decrease the pilot flame.
